

model_10000: low hops / shuffling instead of alternating steps
Flat-Play, seed 5, command 0.5 m/s; example environment 0 of 8

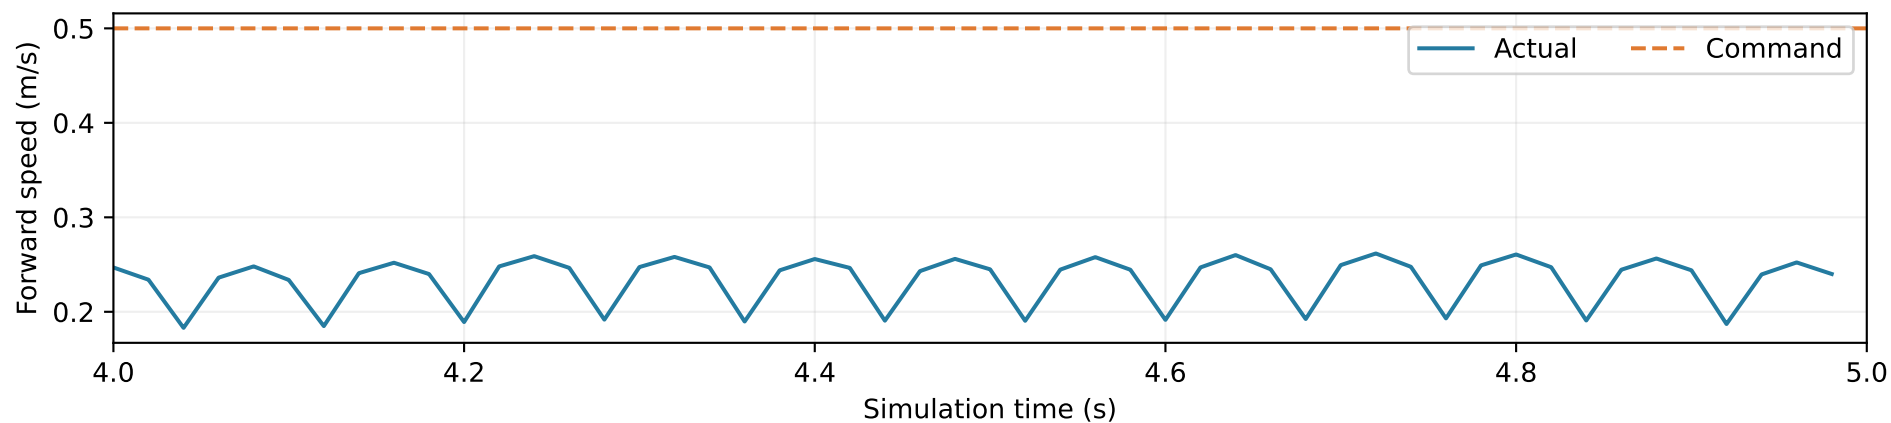

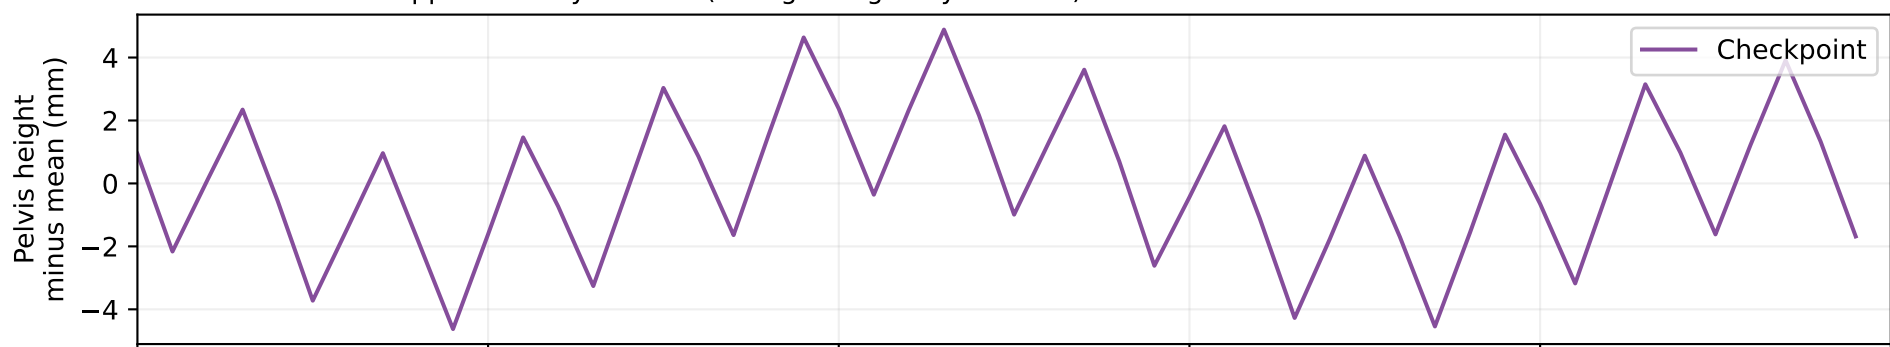

Dark = support contact. Actual contact sampled at 200 Hz.

Measured foot lift is a few millimetres; configured swing target is 60 mm.

Pelvis oscillation is approximately 12.5 Hz (configured gait cycle: 2 Hz).

* Foot body origin minus the configured sole offset; tilting is not compensated.
